

Electronic Data Interchange

for SAP Business One Users

With the Business Integration Suite for SAP Business One, SEEBURGER provides a solution portfolio for all SAP Business One users who wish to start with the digital exchange of business documents: fast, secure and flexible.

■ Application areas

- **Sales order processing** (from electronic purchase order receipt to handling of payments)

If electronic processing via classical EDI (Electronic Data Interchange) is required by the customer, the partner and industry standards must be supported.

In the trading environment messages with customers as **METRO, KarstadtQuelle, SPAR, EDEKA, OBI**, etc. are generally exchanged in the EDIFACT format via Mailbox/400. In the automotive sector communication with the manufacturers and system

suppliers as VW, BMW, Daimler-Chrysler, Porsche, MAN, etc. takes place via OFTP and VDA/ODETTE formats.

- **Procurement and sales via electronic marketplaces** as, e. g. cc-chemplor, ELEMICA, COVISINT, etc. Internet-based standards such as specific XML formats and the HTTPs protocol are used in this context.
- Integration into the group's **internal procedures** (internal replenishment control, subsidiary data management, reporting and consolidation, etc.)

■ Benefits:

- **Improvement of customer loyalty** because specific customer demands for efficient business processes can be fulfilled quickly.
- **Reduction of processing cost** because the time-consuming recording of purchase orders and manual dispatch of invoices are no longer necessary.
- **Improvement of material planning basis** because input errors which occur when the purchase orders are recorded are avoided.

Electronic Data Interchange

for SAP Business One Users

■ **Solution scope:**

The Business Integration Suite for SAP Business One provides the basis for automated exchange of data via different channels with external partners using SAP Business One.

This is implemented by:

- Configuration screens in SAP Business One look & feel for definition of the partner relationships.
- Converter for changing the XML data formats from SAP Business One to partner and branch-specific formats (VDA, EDIFACT, etc.).
- SAP Business One connector for the integration of any applications using SAP Business One.

Message transfer is realized alternatively by optional components (depending on the company requirements, separate licensing or a license agreement is needed):

- **SEEBURGER Clearing Center** (iMartOne) for SAP Business One users with periodic data transfer requirement or if resource bottlenecks do not allow the operation of an own B-to-B communication solution.
- **SEEBURGER SAP Business One communication module** for integrating business partners via classical EDI communication channels (Mailbox/400, AT&T, GEIS, other VAN inputs, OFTP/ISDN, OFTP/TCP-IP, etc.).

■ **The Business Integration Suite for SAP Business One features:**

- **Best price-performance ratio**
 - low-cost, user-dependent licensing of basis software
 - matching expansion solutions according to requirements
- **High investment security**
 - broad market distribution of SEEBURGER solutions
 - flexible expansion options
 - state-of-the-art technology
- **Easy-to-use**
 - user-friendly, uniform operator interface
 - low training requirements
 - partner profiles are imported and enabled with just a few mouse clicks
- **Out-of-the-box**
 - highly integrated in SAP Business One
 - all components are preconfigured on installation CD.
