

SEEBURGER Services for SAP

SEEBURGER Outsourcing: Communication Service for SAP GTS

More and more customs authorities especially in the European Union and North America are moving away from paper-based communication and thus require exporting companies to provide customs and trade documents electronically. Most German exporters already apply the ATLAS procedures implemented by the German customs authority (effective July 2009). With SAP's customs application »Global Trade Services« (GTS) and its embedded »Business Integration Server« (BIS GTS) from SEEBURGER, SAP users are already prepared to comply with these requirements.

To make it even easier for GTS users SEEBURGER has introduced the »Communication Service for SAP GTS«. Using the service, GTS customers can now outsource their BIS GTS to SEEBURGER and focus on their core business. SEEBURGER ensures that the data exchange between SAP GTS and the respective customs authorities is processed smoothly and reliably.

After the initial connection of SAP GTS to the SEEBURGER data center, SEEBURGER specialists take care of all further procedures. Whether it is the configuration of all the messaging processes, the configuration of the communications with the customs authorities, monitoring of all of the involved processes, or the management of system performance and availability, companies can always rely on SEEBURGER's »Communication Service for SAP GTS«. Through status messages sent from SEEBURGER's »Communication Service« to SAP GTS, users can check the progress of customs transactions at any given time.

All systems and processes being run in the SEEBURGER data center are permanently monitored so that a smooth and seamless data exchange with customs authorities is guaranteed. With its state-of-the-art infrastructure the SEEBURGER data center fulfills all of the requirements needed to maintain up to 99.5 % system availability and provide the highest data security and protection standards.

Users of SEEBURGER's »Communication Service for SAP GTS« do not need to make any additional investments for infrastructure, software or personnel. During operational hours no additional running costs for personnel, training, or maintenance arise.

With its »Communication Service for SAP GTS« SEEBURGER offers companies a cost-effective and reliable solution for their electronic data exchange with customs authorities.
