Outsource CAD data exchange processes, focus on your core business with the managed services for engineering data exchange.

**Engineering Data Exchange – Anywhere, Anytime**

Bretten, 09 July 2013 The seamless exchange of CAD data in the manufacturing industry is central to remain globally competitive. With the managed service solution for CAD data exchange, companies are able to prioritise investment in hardware, software and networks. Technical personnel can therefore be freed up for other vital projects.

In the global market, companies build worldwide presence by operating through diversification, research, production, delivery and service centers. In order to improve their competitiveness and enhance their market position at an international level through shorter lead times, they are compelled more than ever to exchange data both internally and externally with engineering partners easily and do so, safely and cost-effectively.

SEEBURGER meets these challenges with a complete solution for CAD data exchange, and offers this as a managed service - onsite or as a hybrid operating model. Dr.-Ing. Şeref Erkayhan, Head of Business Development PLM at SEEBURGER says: "The customer is able to select an operating model which best meets their needs. With a managed service option, the customer benefits from a complete solution in software-as-a-service (SaaS), meaning engineering data exchange is possible remotely through all designated access points." Furthermore, different local legacy systems can be replaced and all engineering data exchange processes centralised. IT environments can additionally be consolidated to reduce costs and increase efficiency in the global exchange of CAD data.
The complete solution for engineering data exchange consists of web portal, outlook integration, mobile app, ENGDAT system and it works with all networks (ENX, Internet, ISDN) and protocols (ODETTE OFTP2). Companies which do not have OFTP/OFTP2 compliant system can use an OFTP2 routing service. Additionally, the solution offers optional CAD integration, PDM, converters and data quality check tools. It enables customers to exchange any form of product data, and connect an unlimited number of OEM and engineering partners.

**SEEBURGER AG on DAIMLER EDM CAE Forum 2013**

The [DAIMLER EDM CAE Forum 2013](#) takes place on 10 - 11 July at the International Congress Centre Stuttgart. The focus of this year’s EDM CAE Forum, entitled “Engineering for Global Success”, is on the future direction of Daimler AG and its development partners. SEEBURGER is proud to be part of the forum where we will be showcasing the complete solution for engineering data exchange at stand DM 38. We are looking forward to meeting you.

Please visit also our website for further information on our complete solution for CAD data exchange.
