

Logistic Solution Professional

Logistics in the automotive industry for suppliers, customers and carriers

Logistic Solution Professional

National and international competition keeps companies under constant pressure to develop improvements in the logistics process. With its Logistic Solution Professional, SEEBURGER offers a range of products which automates the ordering and delivery process of automotive suppliers. LSP meets the logistical requirements of the automotive industry and is a future-proof response to new requirements of automobile manufacturers.

LSP / Supplier Solution Professional

The solution for all suppliers and logistics service providers, especially in automotive delivery processes.

- Extensive integration of all trading partners and their relevant business processes in the electronic data exchange
- Full order management and schedule overview with extensive evaluations
- ERP functionalities with inventory management, requirements determination, container accounting and financial processes

LSP / Customer Solution Professional

The individual WebEDI portal for all companies in the automotive industry that procure parts from suppliers as customers on the buy side.

- The portal solution for integrating all suppliers not equipped with EDI into the electronic data exchange
- Uniform, standardized processes and documents with all integrated suppliers
- VMI, Kanban, 3PL and other processes possible

LSP / Collaboration Cloud Solution

The industry portal for trading partner integration as a SEEBURGER service brings customers and suppliers together in Community Management.

- Continual supplier integration without running costs
- Order processing and data exchange with all integrated customers on one portal
- Print functions and EDI handling of all required documents with customer-specific features
