SEEBURGER E-Invoicing Solution

STAEDTLER implements SEEBURGER E-Invoicing Solution

The SII System (Immediate Information Sharing System) has been in force in Spain since 1st July 2017. The Spanish tax authority (AEAT) requires the immediate transmission of information on advance VAT returns (UVA) to the SII system, updated 1st July 2018.

With the introduction of the SEEBURGER E-Invoicing solution for SII, STAEDTLER now reports the sales tax information electronically to the Spanish tax office almost immediately after the underlying transaction has occurred in a firmly defined XML format.

> *"Thanks to SEEBURGER, we have a current E-Invoicing solution for SII in Spain, which also covers the innovations from the 1st of July 2018. This includes the updated AEAT XML format with additional fields and content as well as the new web services version for communication with the SII system. We are very satisfied with the introduction and implementation of the E-Invoicing on-premises solution."*
